Reviewed by: Kevin at Sometimes in life, you have just have to set yourself a deadline and stick to it. That's how Greg "Red" Lehman formed the Seattle quartet Ryewire, which blends straight-ahead rock with pop hooks. Ryewire makes its Olympia debut Friday at Capitol Theater in a show with Olympia punk-rockers Blacktop Demon, screaming hard rockers Sureal, and The Elephants, an alternative electronic combo from Tacoma. It was challenging, but I'm hard-headed. It was like we had been playing together forever. When the band went into the studio to do a demo, Lehman discovered that another band already had the name. So what does Ryewire mean? Well, Lehman was really wired when he was trying to choose a new name, and he spotted "The Catcher in the Rye" on his bookshelf. Two years later, the band -- now with guitarist Keefe O'Neill and bassist Pete Bossler -- is preparing to release its second album in November. Olympia punk-rockers Blacktop Demon are known for their in-your-face stage presence. Sureal is an up-and-coming screaming hard-rock band from Elma. The Elephants, from Tacoma, are an electro-indie combo influenced by down-in-the-mouth icons such as the Smiths. Over the last decade, as Honda builders have become increasingly focused on ultra-clean, organized, and masterfully executed engine bays, the need for critical ancillary parts and services has skyrocketed. From high-level bodywork to custom metal fabrication and even dress-up hardware, having a well-executed bay is just one of the many items on an almost endless checklist. One of the most crucial items, whether the project involves a basic swap with bolt-ons or a fully built turbo terror, is wiring. Creativity combined with good old-fashioned trial and error has resulted in a number of clever workarounds that allow for the fusion of engines and chassis from various generations using only the factory-issued harnesses and a bit of

finesse. In some cases, however, the age and condition of the harness can be limiting factors, especially when you consider that the most popular Honda platforms to build fall between the "96 era. For those in the competitive race world, the factory harness simply isn't an option when dealing with high-dollar management systems. A number of wiring specialists have surfaced over the years, with some catering specifically to the Honda market and others branching out to other makes and models to meet the demand of a booming industry that has more than enough demand to keep the suppliers busy. Owner and Honda enthusiast Ryan Basseri has been tinkering with Honda wiring and all of its quirks and intricacies for more than 15 years. What started as a hobby soon led to a small upstart and eventually a successful business with a storefront, employees, and a customer base that doesn't seem to be tapering. So successful, in fact, that Basseri tells us his shop is currently assembling and shipping 50 to 70 complete harnesses on a weekly basis. By far the most popular, Rywire's Honda B-series entry-level harnesses offer a few main benefits for the street, weekend track, or show car builder. A plug-and-play affair, these harnesses can be configured to bridge the gap between opposing OBD designations and offer a seamless solution for those using an engine from one generation, and perhaps an ECU and distributor from another. While some may opt to patch the factory harness on their own in an effort to save money, an aftermarket harness will completely replace old wiring and connectors that may be prone to rotting or shorting. The new unit presents a cleaner, one-piece design that snakes around the engine rather than sitting atop the shock towers, which in turn can de-clutter the bay significantly. Modular in design, these harnesses are expandable, allowing for the addition of future upgrades as the build progresses. Affordable Plug-and-play, one-piece design Less intrusive appearance for a cleaner bay New, reliable wiring and connectors to replace aging factory harness. For those starting with a standalone engine management system, harness options that include boost solenoids and various sensors are easily added to the recipe. Pre-planned sensor terminations offer an easy install for the end user, and because ECU selection is determined prior to the construction of the harness, the correct ECU connectors are utilized, keeping installation time short and painless. Similar to an entry-level harness in terms of expandability, future changes and upgrades are supported as well. Proper standalone ECU connectors No patch harness required Correct sensor terminations used for easy plug-in solution. The number of full race applications being ordered through Rywire has grown substantially over the past few years. With many drag, drift, and time attack drivers relying on high-end engine management systems, the need for completely one-off, custom harnesses has never been greater. These harnesses incorporate built-in fuses, relays, or PDMs power distribution module that grant teams highly advanced data for analyzing during or after each race or test session. Basseri serves as a consultant of sorts, offering his experience and insider info to help clients select the best options for their particular setup. Once the parameters are set, Basseri and his team can complete a full race-spec, four-cylinder harness in about three to five days, depending on the options requested. Engines with more cylinders require a few more days for completion. In order to ensure quality and consistency, every harness assembled is tested and resistance checked to verify there are no voltage fluctuations before being shipped to its new home. Compatible with even the most advanced management systems Limitless expansion options Built-in fuses, relays, or PDM Sealed connections Personal build consultation. Tools of the trade. Rywire owner Ryan Basseri and employee Ryan Der rely on these to get the job done, day in and day out. The current workflow includes up to 70 harnesses per week, not including the one-off race versions they build regularly as well. Things start off as nothing more than a bunch of wires, sometimes color-coded, sometimes all black, depending on the type of harness purchased. All-black wiring is more cost effective and indicates an entry-level version. Raychem DR25 heat-shrinkable wire covering along with wire labeling and Rywire tag logos are introduced and corresponding plugs are pinned. Quick-disconnect fittings are often used by race teams for fast removal of engines, and in recent years, show car builds have incorporated them as the crowning touch to a high-level build. Rywire adds Kapton tape to all bulkhead-style harnesses Mil-spec or Autosport. This tape helps keep wires secure and acts as a heat barrier when heat shrinking the protective bootâ€"shown here moments before being heated and properly fitted. Labor intensive, the process of concentric twisting is a strategy that involves twisting the wires around themselves in opposing direction, allowing the loom to remain as flexible as possible. This technique is time consuming but allows a harness to contour to any direction. Here you see a custom Rywire harness and MoTeC system intended for high-level competition with a sealed boot covering all connections. Twisted wire grants flexibility and heat-resistant loom keeps wires safe from outside elements. Below that is an AEM stand-alone system with an entry-level harness intended for a street, show, or weekend track car. Necessity and a substantial price tag difference separate the two types. Though the Rywire crew can construct

the majority of available harnesses from memory, Basseri and Der keep multiple reference guides on hand for consistency and strict quality control. Beyond engine harnesses, Rywire Motorsport Electronics also offers a number of accessories. Brake kits, coil-on-plug conversion kits, sub harnesses, Mil-spec connectors and plates, and much more. They will rock you like a good rock band should, but they'll also put some of the catchiest pop melodies into your head. The songs were mastered by Nick Peterson at Track and Field. Original artwork by Steve Oliva. Pink Flag formed in as a feisty, all-girl pop-punk trio from Durham, N. What they first lacked in polish, they made up for in unrepentant fun, a kind of reckless irreverence that allowed them to make catchy, adrenaline-fueled tunes that seared through romances gone wrong without a thought to the feelings that might be hurt. The songs reveled in doing collateral damage to lost loves, almost as much as they did catching crowds in their raucous catharses. In short, Pink Flag's calling card became roughly hewn pop-punk of the first and most forceful order. But of course, maturation is an inescapable, if scary, reality for every rock band, and the intervening four years have provided plenty for Pink Flag. After their debut, a split CD with the Homewreckers, they needed time to plot out their next move. Convinced that there was and certainly is more to their music than simple riff-driven outbursts, the band began to record again in late , keeping at it until early The results, to be spread across the new King of the Scene EP and a forthcoming full-length, showcase a band that has refined its rock without sacrificing the punchy attitude that defined them. The trio live together now in a house in Durham, and the closeness shows through here. The cuts are tight, ricocheting with jabs of tenacious drumming and volleys of slick, slicing riffs. Our musicianship has improved immensely. We can understand each other better. We are a family now. These five songs blend energetic melodies and words with pop-rock that flirts with post-punk. orce. Still, these songs never lose sight of catchy hooks and tuneful sensibilities, riding smooth, melancholy-rich lines to an end that's both poignant and catchy. It's a bridge between the lighter days of their past and the more serious approach of the upcoming LP, a record that expands into spacious arrangements and approaches post-hardcore aggression. But more important, this EP is proof that Pink Flag have only grown fiercer as they've grown up, maturing into a hard-hitting rock outfit not to be taken lightly.
