After looking and trying different harnesses I finally found this one and it did the trick. Was not correct. Solved my problem. After purchasing a new head unit for my Celica a Dual XDMBT and going through numerous Scosche and other harnesses from auto stores, we finally stumbled across this one. So many hours were wasted trying to use the wrong harnesses, when this one was here all along. Since this model Celica has a separate amplifier and 8 speakers, this is the only harness that will work. After hooking it all up and testing it for the first time the head unit powered on but no sound came out. Thankfully it was as simple as connecting the blue and white cable on the harness instead of the solid blue cable. After that it worked perfect : Also, Scosche tech support was very informative and helpful! See all reviews. Pages with related products. See and discover other items: toyota avalon parts. Verified Purchase. I recently used this line level converter recently when I installed an aftermarket Android Navigation unit in my Audi A4, replacing the factory RNS-E navigation unit. This scosche oea4 unit is very cost effective and did mostly what I needed for installing an aftermarket head unit in an Audi with BOSE. Note that the adjustment pots are very fragile, it even says in the instruction to use great caution not to over twist and break them. Although my sound system is currently working properly with the correct volume levels and no noise, I am still going to try replacing this Scosche Oea4 and RadioShack Ground loop islolators with a PAC SNI which is an all-in-one Level converter and ground loop isolator which already has female RCA connectors on it I had to solder them on to the Oea4. Images in this review. I ordered it CarTx and not only was theirs half the price of the others, but it literally showed up on my doorstep the next morning. The amp itself helped me perform my Bosectomy without a hitch in my Miata. The Amp was brand new in the package, so you can't go wrong ordering through them. Adjustments are easy with a small flat head. Used on my miata with bose System, replaced head unit with an alpine radio and the volume was unbearable at 4 out of Installed this and now everything sounds great. No loss of sound quality. I installed this along with a JVC double din headunit to be installed with my factory Bose amplified speakers in my Nissan Maxima. This wired right in between the two harnesses and I didn't really need to adjust the levels much. The sound quality, volume and overall sound improved immensely. If you are putting in an aftermarket radio into a factory amplified system like Bose, Infinity, etc This product is actually recommended by other big car audio sellers as a solution for integrating aftermarket radios with factory systems, especially Bose; however I found the best price on the unit here on Amazon. For the majority of cars on the road this is NOT true. They will probably put in something like this to make it work. Couldn't be happier with this solution! Did not work for us but it may be useful
